

Please do not limit my ability to choose the type of radio programming I wish to listen to.

I have been a satellite tv subscriber for several years and I see this as latest attempt of the NAB to limit radio competition the same way they did with satellite a few years ago. The NAB is not interested in what the consumer wants or even in providing quality programming. Their only interest is protecting their own business at the cost of the consumer's freedom of choice. As a pay service, satellite radio should be legally able to offer content services that their customers are willing to purchase.

Please reject the NAB petition 04-160 to limit my freedom of choice in radio programming.
